Level	M	M				M	M					

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
ENGINEERING CHEMISTRY
(Common to all branches)

L	T	P	C
2	1	0	3

Course code: 9HC04
Course Objectives:
1. To understand microscopic chemistry in terms of atomic and molecular orbital's.
2. To learn the preparation and applications of commercial polymers and lubricant materials.
3. To learn the industrial problems caused by water and municipal water treatment.
4. To acquire knowledge about different types of batteries and their working mechanism.
5. To develop the concepts and types of corrosion, control methods and protective coatings.
6. To learn the chemical reactions that are used in the synthesis of drug molecules.

Course Outcomes:

After the completion of the course, student will be able to:
1. Explain the fundamental aspects of atomic, molecular orbitals and metal complexes [L2]
2. List general properties of polymers, lubricants and engineering materials [L1]
3. Outline basic properties of water and its usage in domestic and industrial purposes [L2]
4. Summarize electrochemical procedures related to corrosion [L2]
5. Interpret potential applications of chemistry and practical utility of various organic reactions and drug molecules [L5]

UNIT - I
Atomic and molecular structure (6L)

Molecular orbitals of diatomic molecules and plots of the multicenter orbitals, Equations for atomic and molecular orbitals, Energy level diagrams of diatomic (F_2, Cl_2 CO, NO). Pi-molecular orbitals of butadiene and benzene and aromaticity, Crystal field theory and the energy level diagrams for transition metal ions and their magnetic properties, Band structure of solids and the role of doping on band structures.

UNIT – II
Plastics and Lubricants (8L)

Plastics: Polymerization-Addition and Condensation polymerization, Plastics – Thermosetting and Thermoplastics, preparation, properties and **engineering applications of plastics:** PVC, Teflon, Bakelite, Fibers: Nylon 6, 6 and Dacron.

Rubbers – natural and artificial rubber, vulcanization of natural rubber, Buna-S, Buna-N and their

engineering applications. Fabricated Reinforcing Polymers**- engineering applications. Lubricants:** Definition, classification and function of lubricants, Types of lubrication and mechanisms – Thick Film or Hydrodynamic Lubrication, Thin Film or Boundary Lubrication, Extreme Pressure Lubrication. Classification and properties of lubricants – Viscosity, flash and fire point, cloud and pour point and acid value.
Engineering applications

UNIT - III
Water Technology (8L)

(a) **Introduction: -** Hardness of water – types of hardness (temporary and permanent), calculation of hardness- Numerical problems. Estimation of hardness of water by EDTA Method.
(b) **Water for Industrial purpose:** Food, sugar, textile, paper and pharma industries, water for steam making characteristics of boiler feed water, boiler troubles- scale and sludge & Carry over (priming &foaming), boiler corrosion, causticembrittlement.
(c) **Water Treatment:** Internal conditioning- phosphate, carbonate & calgon conditioning. External Treatment: Ion-exchange process. Desalination-reverse osmosis. Municipal water treatment-sedimentation, coagulation, filtration, disinfection-chlorination, ozonization. **Engineering applications: Methodology and working of mineral water plant for drinking purpose.**

UNIT - IV
Electrochemistry (8L)

Conductance – conductors (metallic and electrolytic), types of conductance – specific, equivalent and molar conductance – effect of dilution on conductance.
Free energy and emf, cell potentials, electrode potential (oxidation and reduction).Types of electrodes - redox electrode (quinhydrode electrode), metal – metal insoluble salt electrode and Ion selective electrode. Cell notation and cell reaction –Nernst equation and applications.
Engineering Applications.
Batteries: Types of batteries

(a)   Primary batteries – Lechalanche cell (dry cell), Lithium cell
(b)   Secondary batteries(Accumulators) – Lead acid battery, Lithium-ion battery
(c)   Fuel cells- H_2 – O_2 fuel cell and MeOH-O_2 fuel cell-advantages and applications.
Engineering applications – future water powered car, Hydrogen production and storage.

UNIT - V
Corrosion and Surface treatment (8L)

Corrosion – basic concepts –types of corrosion, chemical, electrochemical corrosion(absorption of O_2 and evolution of H_2) -factors affecting the rate of corrosion.
Cathodic protection – sacrificial anodic protection and impressed current cathodic protection method.

Surface treatment
Mechanical surface treatment and coatings, casehardening and surface coating, thermal

spraying, vapour deposition, Ion implantation, Diffusion coating.

Methods of metallic coatings-hot dipping (tinning and galvanizing), metal cladding (Al cladding), electroplating (copper plating) and electroless plating (nickel plating), electroforming, ceramic, organic and diamond coating.

UNIT-VI

Organic reactions and drug molecules (5L)

Introduction: reactions involving substitution (S_N1, S_N2) addition to double bond(C=C), elimination (E^1 and E^2), oxidation (using $KMnO_4$, CrO_3), reduction (Hydrogenation by Ni/H_2, Pd/C)

Drugs: Definition, classification structure and applications of commonly used drug molecules-paracetamol, aspirin, ibuprofen and diphenhydramine (Benadryl)

Principles of spectroscopy and selection rules: Electronic spectroscopy. Fluorescence and its applications in medicine. Vibrational and rotational spectroscopy of diatomic molecules-**Applications**.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
Problem Solving using C
(Common to all branches)

L	T	P/D	C
3	0	0	3

Course Code: 9FC01

Course Objectives:
1. To acquire problem solving skills
2. To be able to develop flow charts
3. To understand structured programming concepts
4. To be able to write programs in C Language

Course Outcomes:

After the completion of the course, the student will be able to:
1. Explain the basic computer concepts and Illustrate programming principles of C language. [L2,L4]
2. Develop C programs to solve simple mathematical and engineering problems using decision control , loop statements , arrays and strings.[L3,L4]
3. Apply modular programming using functions to develop reusable code.[L3,L4]
4. Analyze memory oriented concepts using pointers to implement inter function, function communication, pointer arithmetic. [L4]
5. Describe file handling concepts using C. [L2]

UNIT I

Problem solving Techniques – Algorithms, pseudo code, flowcharts with examples
Introduction to Computer Programming Languages – Machine Languages, Symbolic Languages, High-Level Languages,
Introduction to C language – Characteristics of C language, Structure of a C Program. Syntax and semantics.
Data Types, Variables – declarations and initialization, formatting input and output.

UNIT – II
C Tokens: Identifiers, Keywords, Constants, variables and operators
Expressions – Arithmetic expressions, Precedence and Associativity, evaluating expressions,
Decision control structures – if, Two-way selection – if else, nested if, dangling else, Multi-way selection – else if ladder and switch.

Repetitive control structures – Pre-test and post-test loops – initialization and updation, while, do while and for loop and nested loops.
Unconditional statements: break, continue and goto statements with examples.

UNIT III

Arrays – Definition and declaration, initialization, accessing elements of in arrays, storing values in arrays,
1-D arrays, 2-D arrays, character arrays and multidimensional arrays.
Function and arrays: passing individual elements to arrays, passing 1-D array, 2-D array to function.
Applications: Linear search, matrix addition, subtraction, multiplication and transpose

UNIT – IV

Functions – User – defined functions - Function definition, arguments, return value, prototype, arguments and parameters, inter-function communication. Standard functions – Math functions. Scope – local, global.
Parameter passing – Call by value and call by reference.
Recursive functions – Definition, examples, advantages and disadvantages.
Macros – Definition, examples, comparison with functions.
Storage Classes – auto, extern, static and Register

UNIT V

Introduction to Pointers – pointer constants, pointer values, pointer variables, accessing variables through pointers, pointer declaration and definition, declaration versus redirection, initialization of pointer variables, Pointer for inter function communication, pointer to pointers, pointer to function.
Arrays and pointers – Pointer arithmetic and arrays, array of pointers
Strings – Declaration, Initialization, Input and Output functions, strings and pointer, string handling functions.

UNIT VI

Files – Concept of a file, streams, text and binary files, stream file processing, system created steams, Standard library I/O functions, file open and close, formatting I/O functions, character I/O functions, Binary I/O, command line arguments, file status functions ,positioning functions.

Applications: Basic operations on files.

Text Books:
1.   E. Balaguruswamy, Programming in ANSI C, Tata McGraw-Hill

2.   Let Us C by Yashavant Kanetkar

Reference Books:
1.   Programming in C (2nd Edition) by Ashok N Kamthane
2.   Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language
3.   Prentice Hall of India

Level	M											M

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
MATRIX ALGEBRA AND CALCULUS
(Common to all branches)

L	T	P	C
2	1	0	3

Pre Requisites: Mathematics Knowledge at Pre-University Level

Code: 9HC11

Course Objectives:

1. Basic operation of matrices and about the linear system and some analytical methods for solution.
2. Concept of Eigen value and Eigen vector and their properties and applications.
3. Quadratic form and its properties.
4. Mean value theorems and their applications to the given functions, series expansions of a function.
5. Various analytical methods to solve first order first degree and also the equations not of first degree ordinary differential equations.
6. Methods to solve higher order ordinary differential equations.

Course Outcomes:

After the course completion the students will be able to:

1. Solve the linear system of equations.[L3]
2. Determine the Eigen values and Eigenvectors of the matrix and apply Cayley Hamilton Theorem to obtain the higher powers of a matrix. [L3, L5]
3. Identify the nature of the quadratic form and reduction of the quadratic form to its canonical form.[L2]
4. Apply appropriate mean value theorems to obtain the mean values and find the power series expansion of a function [L2, L3]
5. Solve the first order and higher order ordinary differential equations with constant coefficients. [L3]

UNIT-I
System of Linear Equations: Elementary row/column operations -Echelon form, Rank of a matrix, Inverse of a matrix by Gauss Jordan method, Non-Homogenous and Homogenous system of linear equations- consistency or inconsistency of a system, Gauss Elimination method, Rank

method and problems, Symmetric, Skew-symmetric and Orthogonal matrices.

UNIT-II
Eigen values and Eigen vectors: Definitions and Properties (without proofs). Evaluation of Eigen values and Eigenvectors for a given matrix, Cayley-Hamilton Theorem (without proof) and its applications in finding higher powers & inverse of a matrix, Diagonalization of a matrix, Hermitian, Skew-Hermitian and Unitarymatrices.

UNIT-III
Quadratic forms: Quadratic forms, Nature, rank, index and signature of a quadratic form. Reduction of quadratic form to canonical form

UNIT-IV
Single Variable Calculus: Rolle's Theorem, Lagrange's and Cauchy's mean value theorems (without proof); Taylor's and Maclaurin's series (without proof) and their application for series expansions of standardfunctions.

UNIT-V
First order ODE: Exact differential equations, equations reduced to exact, Linear and Bernoulli's equations, Newton's law of cooling, Law of natural Growth/Decay.

UNIT-VI
Higher order ODE: Higher order linear differential equations with constant coefficients-Complementary function, Particular Integral, Method of variation of parameters.

Text Books:
1. R K Jain and S R K Iyengar Advanced Engineering Mathematics, NarosaPublications.
2. B.S. Grewal, Elementary Engineering Mathematics, KhannaPublishers
3. Alan Jeffery, Advanced Engineering Mathematics, Academic Press
4. Ramana B.V., Higher Engineering Mathematics, Tata McGraw Hill New Delhi, 11th Reprint,2010.
5. Erwin kreyszig, Advanced Engineering Mathematics, 9th Edition, John Wiley & Sons,2006.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
English
Essential English Language Skills
(Common to all branches)

L	T	P/D	C
2	0	0	2

Course Code: 9HC01

Course Objectives:
1. Recognize and distinguish between different parts of speech
2. Learn the correct usage of articles in sentences
3. Write sentences using tenses
4. Identify when each punctuation marks is needed and its correct usage
5. Recognize the difference between direct and indirect speech and form statements in them
6. Understand the appropriate use of active and passive voice in certain context

Course Outcomes:
After completion of the course, the student will be able to:

1. Understand and demonstrate the use of diverse forms of vocabulary in their communication. [L2]
2. Recognize different grammatical structures and use the appropriate ones in their communication.[L1 & L3]
3. Develop effective reading skills by applying strategies to comprehend different types of texts. [L4 & L3]

Units

1. Vocabulary-1:
1.1 Root words
1.2 Synonyms and Antonyms
1.3 Homonyms, Homophones and Homographs
1.4 One word substitutes

2. Vocabulary-2
2.1 Idioms and Phrases
2.2 Confusables

3. Grammar-1
3.1 The Parts of Speech
3.2 Use of Articles
3.3 Omission of Articles

17

4. Grammar-2

4.1 Tenses

4.2 Prepositions

4.3 Concord

5. Reading & Writing

5.1 Techniques of Reading, Reading Comprehension

5.2 Kinds of Sentences

5.3 Punctuation

6. Writing-2

6.1 Voice – Active voice and Passive Voice

6.2 Speech-Direct & Reported Speech

6.3 Common errors in English

Suggested Reading & References:

1. Word Power Made Easy by Norman Lewis

2. English Grammar In Use: A Self Study Reference And Practice Book Intermediate Learners Book byRaymond Murphy

3. The Logic of English Words by Logophilia Education

4. English Vocabulary In Use Elementary Book With Ans And Cd-Rom by Felicity Odell (Second Edition)

5. Effective Technical Communicatioin by M. Ashraf Rizvi

6.Intermediate grammar usage and composition; M.L.Tickoo, A.E.Subramanian, P.R.Subramanyam; OBS

7. An Interactive Grammar to Modern English by Shivendra K. Verma and HemalathaNagarajan, Frank Bros. & Co.

Level								M	M	H		

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
Oral Communications Lab-1
(Common to all branches)

L	T	P/D	C
0	0	2	1

Course Code: 9HC61

Course Objectives:
1. Comprehend the basic tactics to communicate effectively and set a road map to achieve their communication goals.
2. Know the importance of pronunciation in effective communication and work on mitigating the MTI in their spoken English;
3. Communicate in proper tense with conviction and also frame and pose questions aptly.
4. Describe people, objects and situations, using appropriate vocabulary, phrases and sequencing of ideas.
5. Use the right English language expressions in varying real life contexts.
6. Develop skill of narration through listening and coordination of ideas.

Course Outcomes:
After completion of the course, the student will be able to:
1. Describe people, objects and situations using simple sentences with proper pronunciation. [L1]
2. Use apt expressions and narrate stories in simple sentences. [L3]

OC LAB (2 per week)

Unit 1: Communication Skills

Communication basics, essential elements of effective communication, barriers to communication, setting SMART communication goals.

Activities:
- Ice-breaking activities
- Personal Communication SWOT Analysis
- Communication Case Studies: The Terrible & The Terrific

Unit 2: Pronunciation Matters
Importance of pronunciation, neutralizing mother tongue interference (MTI).

Activities:
- Odd Word Out
- Minimal Pairs Masti
- Shadow reading

Unit 3: Use apt expressions in diverse situations
Self-introduction, Greetings, apologizing, complimenting, inviting, complaining etc.

Activity:
Role play in different contexts using the appropriate expressions

Unit 4:Mind your Tenses
Describing present and past habits, states, and events.
Talking about actions in progress, relating past to the present, talking about the future.
Framing questions. (confirmation/information questions)

Activities:
- Speaking activity on daily routine, how students spent their recent vacation, speaking about their childhood, speaking about future plans.
- Dumb Charades (Present/Past continuous - Present/ Past perfect)
- Guessing game (10/20 yes or no questions)

Unit 5: Hone your Describing skills
Describing people, objects, and situations

Activities:
- Picture descriptions.
- Guessing games - listening to the descriptions.
- Narrating memorable incidents from life.
- Describe your ideal world
- Once upon a time……

Unit 6: The Art of Storytelling
Story telling for career success, the basics of story telling
Activities:
- Building stories - chain activity.
- Story prompts activity.
- Narrate the story. (all the hints are given except linking words and tenses)

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
ENGINEERING CHEMISTRY LAB

Code: 9HC64

L	T	P/D	C
0	0	3	1.5

Course Objectives:
1. Preparation of Inorganic compounds
2. Determination surface tension of a liquid
3. Determination viscosity of lubricant
4. Determination acid value of an oil
5. Estimation hardness of water
6. Analysis the amount of chloride content
7. Determination of cell constant and conductance of solutions
8. Determination of redox potential and emf of solutions
9. Determination of the rate constant of acid
10. Synthesis of a polymer (Thiakol rubber / Urea-Farmaldehyde resin)
11. Synthesis of a drug- Aspirin
12. Estimation of Mn^{+7} by Colorimetry method

Course Outcomes:
After completion of the course, the student will be able to:
1. Estimate the hardness and chloride in water. [L5]
2. Determine strength of acid by potentiomeric and conductometric methods. [L5]
3. Demonstrate preparation of polymer, aspirin and inorganic compound. [L2]

List of Experiments
1. Preparation of coordination complex NiDMG Complex
2. Determination of surface tension
3. Determination ofviscosity
4. Saponification/acid value of anoil
5. Ion exchange column for removal of hardness of water / Estimation of Hardness of water by EDTAMethod
6. Determination of chloride content of water
7. Determination of cell constant and conductance of solutions (HCl Vs NaOH / Mixture of acid Vs Strongbase)
8. Potentiometry - determination of redox potential and emf ($FeSO_4$ Vs $KMNO_4$ / HCl Vs NaOH)
9. Determination of the rate constant of acid catalyzed hydrolysis of methylacetete
10. Synthesis of a polymer- Thiakol rubber / Urea-Farmaldehyderesin
11. Synthesis of a drug-Aspirin

12. Estimation of Mn^{+7} by Colorimetry method

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
Computer Science and Engineering
Problem Solving using C Lab

L	T	P/D	C
0	0	3	1.5

Code: 9FC61

Course Objectives:

1. To be able to understand the fundamentals of programming in C Language
2. To be able to write, compile and debug programs in C
3. To be able to formulate problems and implement in C.
4. To be able to effectively choose programming components.
5. To solve computing problems in real-world.

Course Outcomes:

After completion of this course student will be able to:

1. Develop programs to solve simple mathematical and engineering applications using C language [L3]
2. Illustrate various operations on files to develop programs using C language [L3]

[The laboratory should be preceded or followed by a tutorial to explain the approach or algorithm to be implemented for the problem given.]

1. Unit I (Cycle 1)
   1. Write an algorithm for converting a given Celsius temperature to its equivalent Fahrenheit temperature and draw a flowchart.
   2. Write an algorithm to find the largest of three given numbers and draw a flowchart.
   3. Write an algorithm and draw a flowchart for finding the roots and nature of roots of a quadratic equation, given its coefficients.
   4. Write an algorithm and flowchart for finding the first n Fibonacci numbers, give n.

2. Unit II (Cycle 2)
   1. Write an algorithm, flowchart, and C program for:
   2. Finding the area and circumference of a circle of given radius.
   3. Finding the volume of a sphere of given radius.
   4. Finding the lateral surface area of a right circular cone of given base radius and height.
   5. Finding selling price of an item, given its cost price and profit percent.
   6. Finding the interest on a given principal for a given period of time at a given rate of per year.
   7. Write a C program to display all the sizes of data types in C.

8. Write a C program to display a given decimal integer into an equivalent octal number and hexadecimal number using %o and %x in printf function.

3. **Unit II (Cycle 3)**
    1. Write a C program to find the roots and nature of the roots of a quadratic equation, given its coefficients.
    2. Write a C program for finding the largest of three given numbers.
    3. A salesman gets a commission of 5% on the sales he makes if his sales is below Rs.5000/- and a commission of 8% on the sales that exceeds Rs.5000/- together with Rs.250/-. Write an algorithm or a flowchart and develop C program for computing the commission of the salesman, given his sales.
    4. Write a C Program to demonstrate Marcos.

4. **Unit III (Cycle 4)**
    1. Write three C programs to print a multiplication table for a given number using while, do-while, and for loops.
    2. Write a C program to compute the sum of:
    3. $1+x+x^2+x^3+\ldots\ldots\ldots+x^n$, given x and n.
    4. $1! + 2! + 3! + \ldots + n!$, given n.
    5. $1 - x^2/2! + x^4/4! - x^6/6! + x^8/8! - x^{10}/10! + \ldots$ to n terms where the nth term becomes less than 0.0001.

5. **Unit III (Cycle 5)**
    1. Write a C program in the menu driven style to perform the operations +, -, *, /, % between two given integers.
    2. Write a C program to find the largest and the least of some numbers given by the user.
    3. Write a C program to find the sum of the digits of a positive integer.

6. **Unit IV (Cycle 8)**
    1. Write a program to store the numbers given by the user in an array, and then to find the mean, deviations of the given values from the mean, and variance.
    2. Write a C program to initially store user given numbers in an array, display them andthen to insert a given number at a given location and to delete a number at a given location.
    3. Write a program to store user given numbers in an array and find the locations of minimum and maximum values in the array and swap them and display the resulting array.

7. **Unit IV (Cycle 9)**
    1. Write a C program to implement the operations of matrices – addition, subtraction, multiplication.
    2. Write a program to find whether a given matrix is symmetric, lower triangular, upper triangular, diagonal, scalar, or unit matrix.

8. **Unit III (Cycle 6)**
    1. Write C functions for the following:

a) A function that takes an integer n as argument and returns 1 if it is a prime number and 0 otherwise.
b) A function that takes a real number x and a positive integer n as arguments and returns x^n.
c) A function that takes a positive integer n as an argument and returns the nth Fibonacci number.

2. Using recursion write C functions for the following:
   a) Factorial of a non-negative integer n.
   b) Number of combinations of n things taken r at a time.
   c) Greatest Common Divisor of two integers.
   d) Least Common Multiple of two integers.

9. Unit III (Cycle 7)

a) Write a menu driven style program to compute the above functions (cycle 6) on the choice of the function given by the user.

b) Define macros for the following and use them to find sum of the squares of the minimum and maximum of two given numbers.
   a) Larger of two numbers.
   b) Smaller of two numbers.
   c) Sum of the squares of two numbers.

c) Write a program to generate Pascal's triangle.

d) Write a program to count the number of letters, words, and lines in a given text.

10. Unit V (Cycle 10)

1. Write a function to swap two numbers.
2. Write a function to compute area and circumference of a circle, having area and Circumference as pointer arguments and radius as an ordinary argument.

11. Unit VI (Cycle 12)

1. Write a program to:
   Create a file by the name given by the user or by command line argument and add the text given by the user to that file.

   a) Open the file created above and display the contents of the file.
   b) Copy a file into some other file, file names given by the user or by command line arguments.
   c) Append a user mentioned file to another file.
   d) Reverse the first n characters of a file.

12. Cycle 13:

Case study on Electricity Billing, Restaurant Billing System

PO's	1	2	3	4	5	6	7	8	9	10	11	12
Level	M		L		M				M			L

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year I Semester
WORKSHOP/MANUFACTURING PROCESSES LAB
(COMMON TO ALL BRANCHES)

Course Code: 9BC61
Prerequisite: NIL

L	T	P	C
0	1	3	2.5

Course Objectives:

1. To know the different popular manufacturing process
2. To gain a good basic working knowledge required for the production of various engineering products
3. To provide hands on experience about use of different engineering materials, tools, equipment's and processes those are common in the engineering field
4. To identify and use marking out tools, hand tools, measuring equipment and to work to prescribed tolerances

Course Outcomes:

After completion of the course, the student will be able to:

1. Demonstrate and make use of the workshop tools for Fitting, Carpentry, Welding, Casting, Smithy, Moulding, Glass cutting and Electric connections [L2]
2. Design and Fabricate jobs with wood, MS flat, GI Sheet material [L3]

LIST OF EXPERIMENTS

S.No	Trades	Experiment name
1	Fitting Shop	**1**. Preparation of T-Shape Work piece **2.** Preparation of U-Shape Work piece which contains: Filing, Sawing, Drilling, Grinding.
2	Carpentry	3. Cross Half Lap joint 4. Half Lap Dovetail joint
3	Electrical & Electronics	5. One lamp one switch 6. Stair case wiring

4	Welding (Arc & Gas) & Soldering	7. Practice of Lap and Butt joint by Arc welding Demonstration: Gas welding, Resistance welding & Soldering
5	Casting	8. Preparation of mould cavity using solid pattern 9. Preparation of mould cavity using split pattern Demonstration: pouring of molten metal
6	Tin Smithy	10. Preparation of Rectangular Tray 11. Preparation of Square box
7	Machine Shop	Turning, Drilling and grinding operations on Lathe, Drilling and grinding machines
8	Plastic moulding& Glass Cutting	12 a) Injection Moulding b) Glass Cutting with hand tools
9	Domestic Appliances	Study of internal components & circuit of appliances such as Fans, Mixers, Air blower, Iron box, Rice cooker, Emergency light etc.,

PO's	1	2	3	4	5	6	7	8	9	10	11	12
Level	M					M	L					

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
ENGINEERING PHYSICS

Code: 9HC07

L	T	P	C
2	1	0	3

Course Objectives:

1. Explain about the Quantum Mechanics to understand wave particle duality, necessity of quantum mechanics to explore the behavior of subatomic particles. Schroedinger's Time Independent Wave Equation, Physical Significance of the Wave Function – Application of Schroedinger wave equation.
2. To understand the basic concepts of normal light, Laser and its applications and to know about the fiber optics, principle (TIR), Numerical Aperture, Types of optical Fibers, Step index and graded index Fibers, attenuation in optical fibers. Applications: optical fiber communication system, fiber optic sensors, medical endoscopy.
3. To study the concepts of magnetism and superconductivity, Bohr magneton, Hysteresis nature, domain structure, Meissner effect, types of superconductors, BCS theory and applications of superconductors.
4. To understand the concepts of dielectrics, polarizations and its types, internal fields, Clausius-Mossitti equation, Frequency and temperature effect on dielectrics and its applications – Piezo-electricity, Pyro-electricity and ferro-electricity.
5. To know about the semiconductors, types, carrier concentration, Thermistor, Hall effectand also to understand the concept of PN-junction, I-V Characteristics, LED, Solar Cell and Photo diode.
6. To discuss about the nano-technology, preparation techniques and characterization (XRD, SEM & TEM), CNTs and to know about the fundamentals of radioactivity and its applications.

Course Outcomes:

After completion of the course, the student will be able to:

1. Interpret the concept of quantum mechanics, Schroedinger wave equation and its application for one dimensional potential box. [L2]
2. Explain the principle, construction and working of lasers and fiber optics along with their applications. [L2]
3. Summarize the phenomenon of magnetism and superconductivity. [L2]
4. Outline the concepts of dielectrics, polarization and apply the same for Piezo, Ferro and Pyro-electricity. [L2,L3]
5. Identify the nature of semiconductors and demonstrate the semiconductor devices. [L2,L3]

6. Characterize the nano and bulk materials for various applications. [L3]

Unit:1
Wave nature of particles, Schrodinger equation and its application
Waves and Particles, de-Broglie Hypothesis, Matter waves, Davisson and Germer's Experiment, G.P. Thomson Experiment, Heisenberg's Uncertainty Principle, Schrodinger's Time Independent Wave Equation – Physical Significance of the Wave
Function–Application of Schrodinger wave equation - Particle in One Dimensional Potential Box.

Unit:2
Lasers and Fiber Optics
Lasers:
Characteristics of LASER, Spontaneous and Stimulated Emission of Radiation, Einstein's Coefficients and their significance. Meta-stable State, Pumping, Population Inversion and Optical resonator. Ruby Laser, Helium-Neon Laser, Semiconductor Diode Laser, Applications of Lasers.
Fiber optics:
Principle and construction of optical fiber, Acceptance Angle and Numerical Aperture.Based on refractive index profile classification of Optical Fibers: Single mode & Multimode mode Step index fibers, Single mode & Multimode mode graded index fibers. Attenuation in Optical Fibers (scattering, absorption and bending losses), optical Fiber communication system, Fiber Optic Sensors-Temperature sensor, Pressure sensor and Medical Endoscopy.

Unit:3
Magnetism and Superconductivity

Magnetic Materials:
Origin of Magnetic Moment-Bohr Magneton.Ferromagnetic domain, Magnetization process by using domain, B-H curve explanation based on Domain theory and important outcomes of the curve.Hard and Soft Magnetic Materials.
Super conducting Materials:
General properties of Superconductors. Effect of Magnetic Field, Critical current density, Meissner effect, Penetration depth.Type-I and Type-II superconductors, BCS theory, Magnetic levitation.

Unit:4 Dielectric materials
Electric Dipole, Dipole Moment, Dielectric Constant, Electric Susceptibility. Electronic, Ionic polarizability (Quantitative) and Orientation Polarization (Qualitative). Internal fields in Solids, Clausius-Mossotti equation, Frequency and temperature effect on Dielectrics (Qualitative), Applications - Piezo-electricity, Pyro-electricity and Ferro-electricity.

Unit:5 Semiconductors and Semiconductor devices
Semiconductors:

Fermi Level in Intrinsic and Extrinsic Semiconductors.Carrier concentration of Intrinsic and Extrinsic Semiconductor (qualitative).Direct & Indirect Band Gap Semiconductors, Hall Effect in semiconductors.

Semiconductor devices:
Formation of a PN Junction and working of a PN Junction diode, Energy band Diagram of open circuited PN Diode, I-V Characteristics of PN Junction diode. Applications: LED, Solar Cell and Photo diode.

Unit:6
Nanomaterials and their fabrication: Origin of Nanotechnology, Nano Scale, Surface to Volume Ratio, Quantum Confinement, Bottom-up Fabrication, Sol-gel method, Chemical vapor Deposition technique (CVD); Top-down Fabrication; Ball Milling, Characterization of Nano materials (XRD & TEM), carbon Nano tubes (CNTs), Applications of Nano Materials.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
DATA STRUCTURES
(Common to all Branches)

Prerequisites: Problem Solving using C

Course Code: 9EC01

L	T	P	C
3	0	0	3

Course Objectives:

1. To provide the knowledge of structures, unions, enum and typedef.
2. To understand and learn the applications of Abstract data Type, linear data structures such as stacks, queues and linked list.
3. To comprehend different nonlinear data structures.
4. To understand and analyze the concepts of various searching and sorting techniques.

Course Outcomes:

After completion of this course student will be able to:

1. Explain different data structure and select the appropriate data structure to develop applications. [L2,L3]
2. Illustrate various Linear, Non Linear data structure in developing applications.[L2,L3]
3. Demonstrate various hashing and collision resolution techniques for enhancing the performance of algorithms.[L3]
4. Asses the performance of various searching and sorting techniques. [L5]

UNIT I:

   Structures: Introduction, types, initialization and accessing, Array of Structures, Nested Structures, Self-referential structures. Unions, enum, typedef, Dynamic Memory allocation.

UNIT II:
Introduction to data structures: Abstract data type (ADT), Stacks, Queues and Circular queues and their implementation with arrays.
Applications of Stack: infix to post fix conversion, postfix expression evaluation. Applications of Queues.

UNIT III:
Linked list: introduction, advantages of Linked list over Arrays.
Single linked list: creation, insertion, deletion and display operations

Double linked list: creation, insertion, deletion and display operations
Circular linked list: creation, insertion, deletion and display operations,
 Implementation of Stacks and Queues with singly linked list.

UNIT IV:
Trees: Terminology, Binary Tree: types, representation and traversals (in-order, pre-order, post-order).
Binary Search Tree: introduction, operations (insertion, deletion, display)
AVL Trees: Definition, examples, and operations (insertion, deletion and searching).

UNIT V:
Graphs: terminology, representation, traversals (DFS and BFS).
Heaps: Introduction, Min Heap, Max Heap, Operations on Heaps, Heap Sort.
Hashing: Hash Table, Hash functions.
Collision resolution techniques: separate chaining, open addressing-linear probing, quadratic probing, double hashing.

UNIT VI:
Searching: linear and binary search methods.
Sorting: Bubble Sort, Insertion Sort, Selection Sort, Quick sort, Merge sort
Performance analysis of Searching and Sorting Algorithms.

Level	H	H	M									

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
ADVANCED CALCULUS
(Common to all branches)

Code: 9HC12

Pre Requisites: Mathematics Knowledge at Pre-University Level

L	T	P	C
2	1	0	3

Course Objectives:

1. Basic concepts of multivariable differential calculus.
2. Evaluation of double and triple integrals.
3. Solutions of first order linear and non-linear partial differential equations.
4. Series expansion of a given function in terms of sine and cosine terms.
5. Basic Concepts of vector differential calculus.
6. Concepts of vector integral calculus

Course Outcomes:

After the course completion the students will be able to

1. Compute the Jacobian transformation, the extreme values of a multivariable function and solve the first order linear and nonlinear PDEs. [L2, L3]
2. Evaluate double integrals using change of order of integration and change of variables, triple integrals [L3, L5]
3. Determine Fourier series expansion of a function over the interval.[L5]
4. Find directional derivative and solve the problems on line, surface and volume integrals. [L1, L3]

UNIT-I: Functions of several variables: Limits, Continuity and partial derivative, total derivative, Jacobian, Maxima and minima of two variable functions (without constraints).

UNIT-II: Multiple Integrals: Double integrals, change of order of integration, change of variables (Cartesian to polar), Triple integrals (Cartesian form).

UNIT-III: Partial Differential Equations: Formation of partial differential equations, solutions to first order linear and non-linear partial differential equations – standard Forms,

UNIT-IV: Fourier series: Dirichlet conditions, Fourier series of functions over the intervals of length 2l& 2π. Half range sine and cosine series, Problems on Parseval's theorem (without proof).

UNIT-V: Vector Differentiation: Vector and scalar point functions, gradient, directional derivatives; divergence and curl of a vector point function and problems.

UNIT-VI: Vector Integration: Line integrals, surface integrals, volume integrals, Green, Gauss divergence and Stokes theorems (without proofs) and problems.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

Code: 9AC48

Course Objective:

L	T	P	C
3	0	0	3

To understand the basics of Electrical engineering concepts and applications

Course Outcomes:

After studying this course, the student will be able to

1. Apply the principles of electrical circuits and DC generation with basic equations.[L3]
2. Illustrate the working principles of DC and three phase AC motors.[L3]
3. Analyse the construction and working principles of diode, various transistors with applications.[L4]
4. Use numbering systems to solve Boolean expressions.[L3]

Unit – I: Fundamentals of Electrical Engineering and DC Machines:

Ohm's Law, Kirchhoff's Laws, types of sources, passive elements. Series parallel circuits, mesh and nodal analysis. Superposition, Reciprocity theorem.

DC Machines: Principle of operation of D.C generators, types, E.M.F equation. Principle of operation of D.C motors, Types motors, Torque equation, Losses and efficiency, simple problems on D.C Generators and motors.

Unit – II: Fundamentals of AC circuits:

AC voltage wave form and basic definitions: Peak Value, R.M.S. value, Average values, Form factor and Peak factor, 'j' operator, Analysis of single phase AC circuits series and parallel (Simple circuits). Three phase circuits – Star - delta connection, Relation between line and phase voltages / currents in a 3-phase Star-Delta balanced system.

Unit – III: Induction Motors and Instruments:

Concept of Faraday's laws, 3- phase induction motor working principle, operation and construction details.

Instruments: Introduction, classification of instruments, operating principles, essential features of measuring instruments, permanent magnet moving coil (PMMC) instruments, moving iron (MI) instruments.

UNIT IV-DIODE: Overview of Semiconductors, PN junction diode and Zener diode –Diode circuits: rectifiers (bridge type only), filters, clippers and clampers.

UNIT V- TRANSISTOR: BJT construction, operation, characteristics (CB, CE and CC configurations) and uses – JFET and MOSFET construction, operation, characteristics (CS configuration) and uses.

UNIT VI-DIGITAL ELECTRONICS: Number systems – binary codes –binary arithmetic - Boolean algebra, laws & theorems - simplification of Boolean expression using K maps - logic gates - implementation of Boolean expressions is using logic gates - standard forms of Boolean expression.

Text Books:

1. Basic Electrical Engineering –T.K. Nagesarkar and M.S. Sukhja, Oxford University Press.2nd edition.
2. Basic electrical Engineering – M.S. Naidu and S. Kamakshiah – TataMcGraw-Hill, 2005 edition.
3. Principles of Electronics - V.K.Mehta, S.Chand Publications, 2nd edition.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
ENGINEERING GRAPHICS
(Common to All Branches)

L	T	P	C
1	0	4	3

Code: 9BC01
Pre Requisites: Nil

Course objectives:
1. To teach students the basic principles of Engineering graphics and instruments used and construct curves.
2. To introduce the concept of projections in drawing and its applications for simple drawing entities i.e., points and lines.
3. To impart the knowledge of various types of planes and solids and their projections in different position with respect to principle planes
4. To teach the concept of sections of solids and their developments.
5. To develop a clear understanding of the basic principles involved in three dimensional Engineering drawings.
6. To teach conversion from three dimensional drawing to two dimensional drawing and introduce the concepts of CAD.

Course outcomes:
After completion of this course, the student will able to:
1. Outline the basics of the Engineering Graphics, Curves and Auto Cad [L2]
2. Interpret the concepts of orthographic and isometric projections of lines, planes and solids. [L2]
3. Draw the sections of solids and development of surfaces. [L1]
4. Develop orthographic views from isometric views and vice versa [L3]

UNIT – I

Introduction to Engineering Drawing: Drawing Instruments and their uses, types of lines, Lettering, Dimensioning-Terms & notations, placing of dimensions, general rules of dimensioning **Scales**(concepts).**:**RF, Reducing, Enlarging and Full Scales

Curves: Conic Sections including Rectangular Hyperbola - General method, Cycloid and Involutes of circle.

UNIT – II

Orthographic Projection: Principles of Projection – Methods of projection, First angle and third angle projections.

Projections: Projections of Points, Projections of straight lines –line inclined to one plane and line inclined to both reference planes.

UNIT –III

Projections of regular Planes: types of planes, plane inclined to one reference plane, Oblique planes

Projections of regular Solids: types of solids, Projections of: Prisms, Cylinders, Pyramids, Cones – simple position and axis inclined to one plane only

UNIT –IV

Sections and sectional views of Solids: Sections and Sectional views of Right Regular Solids – Prism, Cylinder, Pyramid – Auxiliary views.

Development of Surfaces: Methods of development, Development of lateral Surfaces of Right Regular Solids – Prisms, Cylinders, Pyramids, Cones and their sections.

UNIT – V

Isometric Projection: Introduction, Isometric axes, lines and planes, Isometric Scale – Isometric drawing or View – Isometric drawing of planes and simple solids such as prisms, pyramids, cylinder, cone.

UNIT –VI

Conversion of isometric views to orthographic views of simple objects.

Introduction to CAD: Benefits of CAD, Graphic input and output devices - Function performed by CAD Software, AUTOCAD-Drawing Entities, Editing commands.

Syllabus for B.Tech CSE I year II Semester
ORAL COMMUNICATION LAB – II
(Common for all Branches)

L	T	P	C
0	0	3	1.5

Code: 9HC62

Course Objectives:
1. To enable students to enhance oral communication skills
2. Develop the skill of speaking effectively
3. Get introduced basics of soft skills and enhance their confidence levels and etiquette
4. Learn to make formal presentations both online and offline.
5. Improve their reading skills by applying different strategies of reading
6. Understand the nuances and learn the art of group discussion

Course Outcomes:

After completion of the course, the student will be able to:
1. Use appropriate language in varied real-world scenarios Practice effectively the speaking skills with the apt body language [L3]
2. Develop a winning presentation and present themselves with ease in various competitive situations.[L4]

Unit	OC Lab (2 hrs. per week)	No. of periods (32 hrs.)
Unit 1	**Small talk and conversational techniques** Tips on enhancing conversation skills. Conversation starters, small talk questions, how to talk to strangers and practice activities on initiating informal conversations. • Talk about your favourite things. • Interview each other.	6
Unit 2	**Role Play/skit/one act play** • Role play assuming fictional characters and non-fictional	4

	characters. • One Act plays • Ad' Venture: Advertisement creation and enacting.	
Unit 3	**Just a minute (JAM)** One-minute speaking activity on topics of students' choice and Extempore.	6
Unit 4	**Presentation skills** Introduction to structural talk. Techniques of making effective presentations. • Five minute PowerPoint presentations.	6
Unit 5	**Group Discussions** Tips on Dos and Don'ts of Group Discussion (GD).Discussion on evaluation pattern during GD. • Practice sessions: GDs on different topics.	4
Unit 6	**Facing questions: Mock Interviews** Strategies of handling Question and Answer sessions after Presentations/seminars. • Question Toss: Practice on asking and answering questions.	6

Suggested Reading:

1. "Effective Technical Communication" by M. Ashraf Rizvi, McGraw Hill.
2. "Skill Sutras" by Jayashree Mohanraj, Prism Books Pvt. Ltd.
3. "Technical Communication: Principles and Practice" by Meenakshi Raman, OUP.
4. "Effective Communication" John Adair, Pan Macmillan Ltd.
5. "Body Language", by Allan Pease, Sudha Publications.
6. "Business Communication: From Principles to Practice" MM Monippally, TataMcGraw Hill.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
ENGINEERING PHYSICS LAB

Code: 9HC66

L	T	P	C
0	0	3	1.5

Course Objectives:
1. Understand the concept of photo electric effect using photo voltaic cell.
2. Discuss the dispersive power of prism-Minimum deviation method.
3. Discussion of diffraction pattern using the grating – LASER.
4. To study the concepts (numerical aperture) of an optical fiber.
5. To explain about magnetic induction, Biot-Savart principle.
6. Study the frequency of AC mains using Sonometer.
7. Explaining about the electrical resonance by using the LCR circuit.
8. To understand the rigidity modulus & periodicity.
9. To discuss the energy gap (E_g) of a semiconductor diode.
10. To study the LED characteristics and forward resistance.
11. To know the time constant of RC circuit.

Course Outcomes:
After completing the experiments, students are able to
1. Demonstrate the concepts of photo electric effect, total internal reflection, diffraction and dispersion of light. [L2]
2. Demonstrate the concepts of rigidity modulus, periodicity and oscillations. [L2]
3. Compare and contrast the Biot-Savart law with Oersted law and explain the concept of Magnetostriction. [L3,L4]
4. Analyze the electrical resonance, time constant, band gap and forward resistance of a semiconductor diode. [L4]

List of Experiments

1. **Photo voltaic cell:**
   -Determination of Planck's constant by using photo voltaic cell.
2. **Dispersive power:**
   -Calculation of dispersive power of a given material of prism by using Spectrometer.
3. **Diffraction Grating:**
   -Determination of wavelength of a given laser source of light by using diffraction grating.
4. **Numerical Aperture:**

-Determination of a Numerical Aperture (NA) of an optical fiber.

5. **Stewart-Gee's Experiment:**
    -Determination of magnetic induction flux density along the axis of a current carrying circular coil using Stewart and Gee's experiment.

6. **Sonometer:**
    -Calculating the frequency of AC supply by using the Sonometer.

7. **LCR Circuit:**
    -Study of series and parallel resonance of an LCR circuit.

8. **Torsional pendulum:**
    -Determination of rigidity modulus of a given wire material using the Torsional pendulum.

9. **Energy Gap:**
    -Determination of the energy gap (E_g) of a given semiconductor.

10. **Light Emitting Diode:**
    -Studying the LED characteristics and calculating the forward resistance of it.

11. **RC Circuit:**
    -Determination of time constant of an RC-circuit.

NOTE: Any **TEN** of the above experiments are to be conducted.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE I year II Semester
DATA STRUCTURES Lab Using C
(Common to all Branches)

Course Code: 9EC61

Prerequisites: Problem Solving using C Lab

L	T	P/D	C
0	0	3	1.5

Course objectives:

1. Create programs on structures and unions
2. Develop the programs on Linear and Non-Linear data structures
3. Write programs on various searching and sorting algorithms.

Course Outcomes:

After completion of the course, the student will be able to:
1. Develop programs to illustrate various linear and nonlinear data structures using C language [L3]
2. Develop programs to assess the performance of various searching and sorting techniques using C language [L3,L5]

Note: Lab Projects will be allocated to the students at the beginning of the semester.

Cycle 1:

1. Define a structure for complex number. Write functions on complex numbers (addition, subtraction, absolute value, multiplication, division, complex conjugate) and implement them in a menu driven style.
2. Define a structure student having members roll no., name, class, section, marks.
   Create an array of 10 students give the data and find the average marks, section-wise.

Cycle 2:
3. Write a C program that implement stack and its operations using arrays
4. Write a C program that implement Queue and its operations using arrays.
5. Write a C program that implement Circular Queue and its operations using arrays.

Cycle 3:
6. Write a C program that uses Stack operations to perform the following:
   i) Converting infix expression into postfix expression
   ii) Evaluating the postfix expression

Cycle 4:
7. Write a C program that uses functions to perform the following operations on
   Single linked list:

i) Creation ii) Insertion iii) Deletion iv) Traversal

Cycle 5:
8. Write a C program that uses functions to perform the following operations on
   Doubly linked list:
   i) Creation ii) Insertion iii) Deletion iv) Traversal in both ways

Cycle 6:

9. Write a C program using functions to perform the following operations on
   Circular linked list:
   i) Creation ii) Insertion iii) Deletion iv) Traversal

Cycle 7:

10. Write a C program to implement operations on the following Data Structures
    Using Singly linked list:
    i) Stack ii) Queue

Cycle 8:

11. Write a C program that uses functions to perform the following:
    i) Creating a Binary Search Tree.
    ii) Traversing the above binary tree in pre-order, in-order and post-order.

Cycle 9:

12. Write C programs that use both recursive and non-recursive functions to perform the
following searching operations for a Key value in a given list of integers:
    i)   Linear Search   ii) Binary Search

Cycle 10:

13. Write C programs that implement the following sorting methods to sort a given
    list of integers in ascending order:
                    i)   Bubble Sort   ii) Insertion Sort   iii) Selection Sort
Cycle 11:

14. Write C programs that implement the following sorting methods to sort a given list of
    integers in ascending order:
    i) Quick sort ii) Merge sort iii) Heap Sort

Cycle 12:
15 Lab Projects- Design and Develop Case Studies such as, Graph Traversal Techniques,
                Collision Resolution Techniques

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
OBJECT ORIENTED PROGRAMMING THROUGH JAVA
(Common to CSE, IT and ECM)

L	T	P/D	C
2	1	0	3

Code: 9EC02

Course Objective:

1. Understand the concepts of Object oriented programming principles of Java.
2. Write the programs and execute using OOP Principles such as garbage collection, overloading methods, constructors, recursion, string handling, StringTokenizer, inheritance and its types, packages, multithreading and threads.

Course Outcomes:

After completion of the course, the student will be able to:
1. Illustrate the concepts of Object Oriented Programming in Java [L2]
2. Apply AWT/SWING controls and applets to develop applications [L3]
3. Utilize multithreading and exception handling concepts to build applications [L3]
4. Develop real time applications using I/O streams. packages and collections frame work [L3]
5. Build network based applications [L3]

UNIT I

History of Java, Java buzzwords, datatypes, variables, simple java program, scope and life time of variables, operators, expressions, control statements, type conversion and costing, arrays,, classes and objects – concepts of classes, objects, constructors, methods, access control, this keyword, garbage collection, overloading methods and constructors, recursion, string handling, StringTokenizer.
Applications: Basic operations on the bank account of a customer.

UNIT II

Inheritance –Definition, single inheritance, benefits of inheritance, Member access rules, super class, polymorphism- method overriding, Dynamic method dispatch, using final with inheritance, abstract classes, Base class object.
Interfaces: definition, variables and methods in interfaces, differences between classes and interfaces, usage of implements and extends keyword, interfaces, uses of interfaces, packages
Applications: Extending the banking operations to the loan applicants.

UNIT III

Packages: Definition, types of packages, Creating and importing a user defined package.

Introduction to I/O programming: DataInputStream, DataOutputStream, FileInputStream, FileOutputStream, BufferedReader.

Collections: interfaces, Implementation classes, and Algorithms (such as sorting and searching).

Applications: Searching for a string in the text. PNR status check, students' result sorting.

UNIT IV

Exception handling -exception definition, benefits of exception handling, exception hierarchy, usage of try, catch, throw, throws and finally, built in exceptions, creating own exception sub classes.

Multi-Threading: Thread definition, types of multitasking, uses of multitasking, thread life cycle, creating threads using Thread class and Runnable interface, synchronizing threads, daemon thread.

Applications: Illegal entry handling in the registration form. (Example: entering incorrect intermediate hall-ticket number in EAMCET Registration form)

UNIT V

Advantages of GUI over CUI ,The AWT class hierarchy, Introduction to Swings, Swings Elements:- JComponent, JFrame, user interface components- JLabels, JButton, JScrollbars, text components, check box, check box groups, choices, lists panels – scrollpane, menubar, graphics, layout, managers –boarder, grid, flow, card and grid bag.

Event handling: Delegation event model, closing a Frame, mouse and keyboard events, Adapter classes.

Applications: developing calculator, developing feedback form, developing bio data.

UNIT VI

Applets – Concepts of Applets, differences between applets and applications, life cycle of an applet, types of applets, creating applets, passing parameters to applets.

Applications: Developing of simple advertisements.

Networking – Basics of network programming, addresses, ports, sockets, simple client server program, multiple clients, sending file from server to client.

Applications: One to one Chat application

TEXT BOOKS:

1. Java; the complete reference, 6th edition, Herbert Schildt,TMH.
2. Introduction to Java programming 6th edition, Y. Daniel Liang, Pearsoneducation.

REFERENCES:

Level						M						M

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Digital Electronics

L	T	P /D	C
3	0	0	3

Code: 9CC51

COURSE OBJECTIVES:

To learn the concepts of various number systems, design of Combinational and Sequential Circuits using Logic gates and PLDs.

COURSE OUTCOMES:

After completing of the course, the students will be able to:

1. Explain number systems, and apply Boolean theorem, postulates and K-maps to minimize switching expressions.[L2, L3-U1,U2]
2. Design the various combinational and sequential logic circuits using logic gates and flip flops.[L6-U3, U4]
3. Analyze and Design the sequential machines such as counters, registers etc.[L4, L6- U4, U5]
4. Develop the combinational logic circuits using PLD's and interpret the memory architectures. [L2, L3- U6]

UNIT – I

Fundamentals of Digital Systems and logic families

Digital signals, digital circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, signed binary, octal, hexadecimal number, number conversion. Characteristics of digital lCs, Error detecting and correcting codes (7 bit Hamming Code).

UNIT – II

Boolean algebra

Boolean algebra, Postulates and theorems, Standard representation for logic functions, K-map representation, simplification of logic functions using K-map, Boolean function minimization using Quine-Mclusky method.

UNIT - III

Design of combinational circuits Design of Multiplexer, De-Multiplexer/Decoders, Adders, Subtractors, Parallel adder/Subtractor, BCD arithmetic, digital comparator, parity checker /generator, code converters.

UNIT - IV

Sequential circuits-I

A 1-bit memory, the circuit properties of Bistable latch, the clocked SR flip flop, J- K, T and D-types flipflops, triggering mechanism of flip-flops, flip-flop conversion.

UNIT - V

Sequential circuits-II

Applications of flip-flops: Ripple (Asynchronous) counters, synchronous counters, counters design using flip flops, asynchronous sequential counters, shift registers, applications of shift registers, serial to parallel converter, parallel to serial converter, ring counter.

UNIT - VI

Semiconductor memories and Programmable logic devices

Memory organization and operation, Memory hierarchy and expanding memory size, classification and characteristics of memories, sequential memory, read only memory (ROM), read and write memory(RAM), Programmable logic devices: PROM, PLD and PAL.

Text Books:

1. R. P. Jain, "Modern Digital Electronics", McGraw Hill Education, 2009.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Quantitative Aptitude and Logical Reasoning

Code: 9HC16

L	T	P /D	C
3	0	0	3

Pre Requisites: Nil

Course objectives:

To answer general problems in his everyday life within in short time and to improves the certain skills of a student such as numerical and logical ability, mental capacity and also in sharpening minds.

Course outcomes:

After completion of the course, the student will be able to:
1. Solve logical thinking and analytical related problems and thereby develop their employability skills to face the real world scenario. [L3]

Unit I: Number System: Test for Divisibility, Test of prime number, Division and Remainders – HCF and LCM of Numbers–Fractions and Decimals -Average-Problems on Ages- Problems on Numbers- Ratio and Proportion.

Unit II: Percentage – Profit, Loss and Discount – Partnership and Share-Simple Interest - Compound Interest. Time and Work- Pipes and Cisterns-Time and Distance- Problems on Trains- Boats and Streams.

Unit III: Allegation or Mixtures, Clocks & Calendar, Mensuration: Area of Plane Figures, Volume and Surface Area of Solid Figures. Data Interpretation: Tabulation, Bar Graphs, Pie Charts, Line Graphs.

Unit–IV: Series Completion: Number Series, Alphabet Series, Alpha – Numeric Series.
Analogy: Completing the Analogous Pair, Simple Analogy, Choosing the Analogous pair, Double Analogy, Word Analogy, and Number Analogy.
Classification: Word Classification, Number Classification and Letter Classification.
Coding & Decoding: Letter Coding, Number Coding, Matrix Coding, Substitution, Deciphering Message Word Codes, Jumbled Coding. Crypt arithmetic-Inequalities-Input Output Tracing

Unit–V: Blood Relations– Direction sense test- Number, Ranking & Time Sequence Test – Mathematical Operations-Arithmetical Reasoning. Puzzle Test: Classification Type Questions, Seating Arrangements, Comparison Type Questions, Sequential Order of Things, Selection Based on Given Conditions, Family Based Puzzles, Jumbled Problems.

Unit –VI: Logical Venn Diagrams –Cubes and Dice – Analytical Reasoning-Assertions and Reason–Logical Deductions-Syllogism -Statement and Arguments-Statement and Conclusions- -Data Sufficiency.

Text Books:
1. Quantitative Aptitude by R.S.Agarwal
2. Verbal and Non Verbal Reasoning by R.S.Agarwal.

Level	M	M										

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Discrete Mathematics

Code: 9F303

L	T	P /D	C
2	1	0	3

Prerequisites: Mathematics- I and II

Course Objectives:

1. Define the syntax and semantics of propositional logic.
2. Translate statements from a natural language into its symbolic structures in logic.
3. Prove elementary properties of modular arithmetic and explain their applications in Computer Science, for example, in cryptography and hashing algorithms.
4. Apply the notion of relations on some finite structures, like strings and databases.
5. Analyze algorithms using the concept of functions and function complexity.
6. Apply graph theory models of data structures and state machines to solve problems of connectivity and constraint satisfaction, for example, scheduling.

Course Outcomes:

After completion of the course, the student will be able to:

1. Interpret mathematical arguments and identify fallacious reasoning, predicates and effectively use automatic theorem proving [L2]
2. Demonstrate operations on sets, functions, relations. [L2]
3. Solve problems that involve: computing permutations and combinations, Binomial and
4. Multinomial theorems [L3]
5. Analyze and deduce problems involving recurrence relations and generating functions [L4]
6. Apply graph theory Spanning trees, planar graphs, Isomorphism and connectivity [L3]

UNIT – I
Propositional Logic: Statement and notations, Connectives, Well-formed Formulas, Truth Tables, Tautology, Equivalence, Implication, Rules of inference, Arguments, Proof by contradiction, Conditional Proof Normal forms, and Automatic theorem proving.
Objective: student will be able to understand statements, ,their truth value, constructing truth tables and will be able to prove them using different laws such as associative and commutative etc…

UNIT-II

First order logic: Predicates, Quantifiers, Free and Bound variables, Rules of inference, Consistency, Automatic Theorem Proving.

Objective: student will be able to use universal and existential quantifiers to describe predicates and effectively use automatic theorem proving

UNIT – III

Relations: Properties of Binary Relations, Equivalence, transitive closure, Compatibility & Partial Ordering Relations, Hasse Diagrams, Lattice and its properties.

Algebraic structures: Algebraic systems, Examples and general properties, Semi groups and Monoids. Groups, Subgroups, Ring, Homomorphism, Isomorphism.

Objective: student will be able to learn different relations and their properties. use of different algebraic structures and their use in mathematics.

UNIT –IV

Elementary Combinatorics:

Basics of counting, Combinations & Permutations with and without repetitions, Constrained repetitions. Binomial coefficients, Binomial and Multinomial theorems, Euler function, Derangemants, Principle of inclusion and exclusion, Pigeon hole principle and its applications.

Objective: student will be able to apply permutations and combinations to solve problems. use of pigeonhole principle and inclusion exclusion principles to solve problems.

UNIT V

Recurrence relations: Generating functions. Function of sequences. Recurrence relations, Solving recurrence relations by substitution and generating functions. Characteristic roots. Solution of Inhomogeneous recurrence relations.

Objective: student will learn to solve various recurrence relations by using different techniques.

Unit VI

Graph Theory: Basic concepts**,** Representation of Graph, DFS, BFS, Spanning trees, Planar graphs, coloring, Isomorphism and subgraphs, Multi graphs and connected graphs, Euler Circuits, Hamiltonian graphs, Chromatic numbers,.

Objective: student will learn the basics of graph theory, different ways of traversing the graph and different types of graphs and circuits which has important applications in further subjects.

TEXT BOOKS :

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Universal Human Values
(Common to All Branches)

L	T	P/D	C
3	0	0	3

Code: 9HC03

Human Values Courses: This course also discusses their role in their family. It, very briefly, touches issues related to their role in the society and the nature, which needs to be discussed at length in one more semester for which the foundation course named as "H-102 Universal Human Values 2: Understanding Harmony"is designed which may be covered in their III or IV semester. During the Induction Program, students would get an initial exposure to human values through Universal Human Values – I. This exposure is to be augmented by this compulsory full semester foundation course.

Course Objectives:

1. Development of a holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.
2. Understanding (or developing clarity) of the harmony in the human being, family, society and nature/existence
3. Strengthening of self-reflection.
4. Development of commitment and courage to act.

Course Outcomes:
After completion of the course, the student will be able to:

1. Interpret an understanding of holistic perspective using self-exploration, natural acceptance and basic human aspirations.[L2]
2. Observe and practice harmony about self, family, society, nature and existence.[L1,L6]
3. Operate themselves on the above holistic understanding and professional ethics.[L3]

Unit 1:
Course Introduction - Need, Basic Guidelines, Content and Process for Value Education
1. Purpose and motivation for the course, recapitulation from Universal Human Values-I
2. Self-Exploration–what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration
3. Continuous Happiness and Prosperity- A look at basic Human Aspirations

4. Right understanding, Relationship and Physical Facility- the basic requirements for fulfillment of aspirations of every human being with their correct priority
5. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario
6. Method to fulfill the above human aspirations: understanding and living in harmony at various levels.
Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

Unit 2:
Understanding Harmony in the Human Being - Harmony in Myself!
7. Understanding human being as a co-existence of the sentient 'I' and the material 'Body'
8. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility
9. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer)
10. Understanding the characteristics and activities of 'I' and harmony in 'I'
11. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail
12. Programs to ensure Sanyam and Health. Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease.

Unit 3:
Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship
13. Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship
14. Understanding the meaning of Trust; Difference between intention and competence
15. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship
16. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals
17. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family.
Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives.

Unit 4:
Understanding Harmony in the Nature and Existence - Whole existence as Coexistence
18. Understanding the harmony in the Nature
19. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature
20. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space
21. Holistic perception of harmony at all levels of existence.

Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

Unit 5:
Implications of the above Holistic Understanding
22. Natural acceptance of human values
23. Definitiveness of Ethical Human Conduct
24. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order

Unit 6:
Harmony on Professional Ethics
25. Competence in professional ethics:
a. Ability to utilize the professional competence for augmenting universal human order
b. Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems,
 c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
26. Case studies of typical holistic technologies, management models and production systems
27. Strategy for transition from the present state to Universal Human Order:
a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers
b. At the level of society: as mutually enriching institutions and organizations
28. Sum up.
Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. to discuss the conduct as an engineer or scientist etc.

PO's	1	2	3	4	5	6	7	8	9	10	11	12
Level	H	H	M						L			H

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
OBJECT ORIENTED PROGRAMMING THROUGH JAVA LAB
(Common to CSE, IT and ECM)

L	T	P/D	C
0	0	4	2

Code: 9EC62

Course objectives:

Understand, design and execute the programs involving concepts of Java and object-oriented programming principles.

Course Outcomes:
After completion of the course, the student will be able to:
1. Develop programs by applying the concepts of object oriented programming to solve mathematical and engineering problems [L3]
2. Build applications using collections frame work [L3]

List of Programs:

1. A) Write a program to print prime numbers up to a given number.
   B) Write a program to print roots of a quadratic equation $ax^2+bx+c=0$.
   C) Write a program to print Fibonacci sequence up to a given number.

2. A) Define a class to represent a bank account and include the following members
        Instance variables:

    (i) Name of depositor   (ii) Account No   (iii) Type of account
    (iv) Balance amount in the account

Instance Methods:
To assign instance variables (Constructors-Zero argument and parameterized)
1. To deposit an amount
2. To withdraw amount after checking the balance
   To display name and address
    Define Execute Account class in which define main method to test above class.
   B) In the above account class, maintain the total no. of account holders present in the bank and also define a method to display it. Change the main method appropriately.
   C) In main method of Execute Account class, define an array to handle five accounts.
   D) In Account class constructor, demonstrate the use of "this" keyword.
   E) Modify the constructor to read data from keyboard.
   F) Overload the method deposit() method (one with argument and another without argument)

G) In Account class, define set and get methods for each instance variable.

Example:

For account no variable, define the methods get Account No() and set Account No (int accno) In each and every method of Account class, reading data from and writing data to instance variables should be done through these variables.

3. A) Define Resister class in which we define the following members: Instance variables: resistance Instance Methods: give Data():To assign data to the resistance variable display Data(): To display data in the resistance variable constructors

Define subclasses for the Resistor class called Series Circuit and Parallel Circuit in which define methods: calculate Series Resistance ( ) and calculate Parallel Resistance () respectively. Both the methods should take two Resistor objects as arguments and return Resistor object as result. In main method, define another class called Resistor Execute to test the above class.

B) Modify the above two methods which should accept array of Resistor objects as argument and return Resistor object as result.

4. A) Write a program to demonstrate method overriding.
   B) Write a program to demonstrate the uses of "super" keyword (three uses)
   C) Write a program to demonstrate dynamic method dispatch (i.e .Dynamic polymorphism).

5. A) Write a program to check whether the given string is palindrome or not.
   B) Write a program for sorting a given list of names in ascending order.
   C) Write a program to count the no. of words in a given text.

6. A) Define an interface "Geometric Shape" with methods area( ) and perimeter( ) (Both method's return type and parameter list should be void and empty respectively.

   Define classes like Triangle, Rectangle and Circle implementing the "Geometric Shape" interface and also define "Execute Main" class in which include main method to test the above class

B) Define a package with name "sortapp" in which declare an interface "SortInterface" with method sort( ) whose return type and parameter list should be void and empty. Define "subsortapp" as subpackage of "sortapp" package in which define class "SortImpl" implementing "SortInterface" in which sort() method should print a message linear sort is used. Define a package "searchingapp" in which declare an interface "SearchInterface" with search( ) method whose return type and parameter list should be void and empty respectively. Define "searchingimpl" package in which define a "Search Impl" class implementing "Search Interface" defined in "searching app" package in which define a search( ) method which should print a message linear search issued.

Define a class Execute Package with main method using the above packages (classes and its methods).

Use Array List class of Collections Framework to and use algorithms to search and sort the element of an array.

7) Modify the withdraw() method of Account class such that this method should throw "Insufficient Fund Exception" if the account holder tries to withdraw an amount that leads to condition where current balance becomes less than minimum balance otherwise allow the account holder to withdraw and update the balance accordingly.

8.A) Define two threads such that one thread should print even numbers and another thread should print odd numbers.
  B)   Define more than one thread to print tables using synchronization concept.
  C) Define two threads such that one thread should read a line of text from text file and another thread should write that line of text to another file. (Thread communication example).

9) Design the user screen as follows and handle the events appropriately.

First Number   [   ]

Second Number   [   ]

Result   [   ]

        [ADD]   [SUBTRACT]

10) Write a Java program for handling mouse events and key events.
11) a) Write a program for handling window events.
     b) Develop an applet that displays a simple message.
12) Develop a client that sends data to the server and also develop a server that sends data to the client (two-way communication)
13, 14) Develop Lab projects (such as banking application, simple gaming application, scientific calculator, Client-Server Communication in corporating file handling mechanisms, etc.)

PO's	1	2	3	4	5	6	7	8	9	10	11	12

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Digital Electronics Lab

Code: 9CC82

L	T	P/D	C
0	0	3	1.5

Course Objectives:

To learn the different numbering systems, Boolean functions and design of Combinational and Sequential Circuits.

Course Outcomes:

After completing this course, the students will be able to:

1. Design combinational circuits using logic gates[L6]
2. Demonstrate the applications of sequential circuits. [L2]

Lab experiments:

Verify the operations of the Digital ICs (Hardware) in the Laboratory
1. Realization of A-O-I Gates using Universal gates
2. Verification of Demorgans Theorem
3. Implementation of 4-Bit binary to Gray code converter
4. Verification of 4-bit Binary Adder using IC 74x283
5. Implementation of 4-bit parity generator
6. Realization of 8x1 Multiplexer using IC 74x151
7. Verification of 3x8 Decoder using IC 74x138
8. Verification of Priority encoder using 74x148
9. Verification of D Flip-Flop IC 74x74
10. Conversion of JK-Flipflop to D-Flipflop
11. Verification of Decade counter using IC74x90
12. Verification of Universal Shift Register

PO's	1	2	3	4	5	6	7	8	9	10	11	12

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year I Semester
Basic Electrical and Electronics Engineering Lab

L	T	P/D	C
0	0	4	2

Code: 9AC95

Prerequisite: NIL

Course Outcomes:

After completing this course, the students will be able to:

1. Evaluate the efficiency of DC and AC motors.[L5]

2. Illustrate the characteristics of DC generator, diode, transistor [L2]

Electrical Experiments

1. Brake test on 3-phase induction motor (performance characteristics).

2. Speed control of DC shunt motor by

    a) Armature Voltage Control .

    b) Field flux control method.

3. Brake test on DC shunt motor.

4. Swinburne's test on DC shunt machine.

5. OCC characteristics of DC shunt generator.

6. Verification of superposition and Reciprocity Theorems.

Electronics Experiments

1. PN Junction diode characteristics   A. Forward bias B. Reverse bias.

2. Zener diode characteristics

3. Half wave Rectifier with and without filters.

4. Full wave Rectifier (Centre tapped and Bridge)with and without filters

5. Transistor CE characteristics (Input and Output)

6. Verification of Logic gates

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Computer Organization

L	T	P/D	C
3	0	0	3

Code: 9CC54

Course Objectives

Learn about basic structure of computer, different data representations and Instruction sets; 8086 architecture, addressing modes and instruction set also write efficient programs to interface devices with 8086 processor.

Course Outcomes:

After completing this course, student should be able to

1. Interpret the number system and the structure of computer along with the instruction set and Register transfer language. [L2-U1,U2,U3]
2. Distinguish micro-programmed and hard-wired control units. [L3-U3]
3. Explain 8086 microprocessor architecture and develop programming. [L2,L3-U4,U5, U6]
4. Develop the various interfacing circuits with 8086 microprocessor. [L3-U6]

UNIT-I

Basic Structure of Computer: Computer Types, Functional units, Basic operational concepts, Bus structures, Software, Performance, multiprocessors and multi computers.

Data Representation: Fixed Point and Floating – Point Representation

UNIT-II

Register Transfer Language and Micro-operations: Register Transfer language. Arithmetic Micro-operations, logic micro-operations, shift micro operations, Arithmetic logic shift unit. Instruction codes, Computer instructions – Instruction cycle. Memory – Reference instructions. Input – Output and Interrupt; STACK organization; Instruction formats.

UNIT-III

Control Unit Design: Control memory, Address sequencing, micro-program example, design of control unit-Hard wired control, Micro-programmed control.

Computer Arithmetic Operations: Addition and subtraction, multiplication Algorithms, Division Algorithms, Fixed point Arithmetic operations.

UNIT-IV

Architecture of 8086 Microprocessor. Special functions of General purpose registers. 8086 flag register and function of 8086 Flags, Addressing modes of 8086, Instruction set of 8086.

UNIT-V

Assembler directives, simple programs, procedures, and macros. Assembly language programs involving logical, Branch & Call instructions, sorting, evaluation of arithmetic expressions, string manipulation.

UNIT-VI

Pin diagram of 8086-Minimum mode and maximum mode of operation.Timing diagram. Memory interfacing to 8086 (Static RAM&EPROM).8255 PPI-Various modes of operation and interfacing to 8086. Stepper motor Interface to 8086. Interrupt structure of 8086. Vector interrupt table. Interrupt service routines.

TEXT BOOKS:

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
DATABASE MANAGEMENT SYSTEMS
(Common to CSE, IT & ECM)

L	T	P/D	C
3	0	0	3

Code: 9FC04
Prerequisite: NIL
Course Objectives:
1. Understand the different issues involved in the design and implementation of a database system.
2. Learn the physical and logical database designs, database modeling, relational, hierarchical, and network models and to understand and use data manipulation language to query, update, and manage a database.
3. Develop an understanding of essential DBMS concepts such as: database security, integrity, concurrency and design and build a simple database system and demonstrate competence with the fundamental tasks involved with modeling, designing, and implementing a DBMS.

Course Outcomes:
After completion of this course student will be able to:

1. Understand the basic concepts of DBMS, ER model and How to draw ER diagrams. [L4]
2. Implementing queries using SQL and Applying the Relational algebra and Calculus to define expressions for queries in Databases. [L3]
3. Apply normalization techniques to improve the database design. [L5]
4. Understand the concepts of Transaction, recovery and Concurrency Control techniques. [L3]
5. Analyze External Storage Organization mechanisms and apply Indexing in databases for query optimization to enhance system performance. [L4]

UNIT I
Data Base Systems: Data Vs Information, Data base System Applications, data base System VS file System – View of Data – Data Abstraction –Instances and Schemas – data Models – the ER Model – Relational Model – Other Models – Database Languages – DDL – DML – database Access for applications Programs – data base Users and Administrator – Transaction Management – data base System Structure – Storage Manager – the Query Processor.
Data base design and ER diagrams – Entities, Attributes and Entity sets – Relationships and Relationship sets – Additional features of ER Model – Concept Design with the ER Model – Data Modeling checklist.
Application- ER diagram for a college

UNIT II

Introduction to the Relational Model – Integrity Constraint Over relations – Enforcing Integrity constraints – Querying relational data – Logical data base Design – Introduction to Views – Destroying /altering Tables and Views.
Relational Algebra – Selection and projection set operations – renaming – Joins – Division – Examples of Algebra overviews – Relational calculus – Tuple relational Calculus – Domain relational calculus.
Application - Student database design.

UNIT III

Form of Basic SQL Query – Examples of Basic SQL Queries – Introduction to Nested Queries – Correlated Nested Queries Set – Comparison Operators – Aggregative Operators – NULL values – Comparison using Null values – Logical connectivity's – AND, OR and NOT – Impact on SQL Constructs – Outer Joins – Disallowing NULL values – Complex Integrity Constraints in SQL Triggers, Embedded SQL.
Application - working with Aviation company database.

UNIT IV

Schema refinement – Problems Caused by redundancy – Decompositions – Problem related to decomposition – reasoning about FDS – FIRST, SECOND, THIRD Normal forms – BCNF – Lossless join Decomposition – Dependency preserving Decomposition – Multi valued Dependencies – FORTH NormalForm.
Application - Faculty Evaluation Report.

UNIT V

Transaction Concept- Transaction State- Implementation of Atomicity and Durability – Concurrent – Executions – Serializability- Recoverability – Implementation of Isolation – Testing for serializability- Lock –Based Protocols – Timestamp Based Protocols- Validation-Based Protocols – Multiple Granularity, Recovery and Atomicity – Log – Based Recovery – Recovery with Concurrent Transactions – Buffer Management – Failure with loss of nonvolatile storage.
Application - Production Management System.

UNIT VI

Data on External Storage – File Organization and Indexing – Cluster Indexes, Primary and Secondary Indexes – Index data Structures – Hash Based Indexing – Tree base Indexing – Comparison of File Organizations – Indexed Sequential Access Methods (ISAM) – B+ Trees: A Dynamic Index Structure.
Application – Creating B+ tree on Instructor File.

TEXT BOOKS:
1. Data base System Concepts, Silberschatz, Korth, McGraw hill, Vedition.
2. Data base Management Systems, Raghurama Krishnan, Johannes Gehrke, TATAMcGrawHill 3rdEdition
3. Database Management Systems, Peter Rob, A.AnandaRao,Carlos Coronel ,CENGAGE Learning

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Python Programming

L	T	P/D	C
2	1	0	3

Code: 9FC02

Prerequisite: Problem Solving using C Lab

Course Objectives:-

Use Python interactively, execute a Python script at the shell prompt, use Python types, expressions, and None, use string literals and string type, use Python statements (if...elif..else, for, pass, continue, . . .), understand the difference between expressions and statements, understand assignment semantics, write and call a simple function., utilize high-level data types such as lists and dictionaries, understand the difference between mutable and immutable types, write a simple class and access methods and attributes, import and utilize a module, read from and write to a text file.

Course Outcomes:

After completion of this course student will be able to:

1. Outline the basic concepts of the python, illustrate syntax and semantics of python. [L1&L2]
2. Infer components of function, demonstrate functionalities of string, List, Tuples and Dictionary to build application.[L2&L3]
3. Make use of files, built - in modules and packages by exploring its functions in building specific application. [L3]
4. Examine Python-OOP concepts and identify Motives or causes of different exceptions and handling them. [L4]
5. Develop the skills for data processing and GUI designing in Python. [L6]

Unit -I :

Introduction to Python: History, Features, Modes of Execution, Setting up path, working with Python Basic   Syntax, Variable and Data Types, Operators.   Conditional Statements (If, If-else, Nested if-else) Looping (for, While Nested loops) Control Statements (Break, Continue, Pass).

Input-Output: Printing on screen, Reading data from keyboard, Opening and closing file

Unit-II:

Functions: Defining a function, calling a function, Types of functions, Function Arguments, Anonymous functions, Global and local variables

String Manipulation: Accessing Strings, Basic Operations, String slices, Function and Methods

Lists: Accessing list, Operations, Working with lists Function and Methods

Tuple: Accessing tuples, Operations, Working.

Dictionaries: Accessing values in dictionaries, working with dictionaries, Properties Functions and Methods.

Unit-III:

Modules: Importing module, Math module, Random module, Packages

Exception Handling: Exception, Exception Handling, Except clause, Try? Finally clause User Defined Exceptions

Unit-IV:

Python- OOPs concept: Class and object, Attributes, Inheritance, Overloading Overriding, Data hiding.

Regular expressions: Match function, Search function, Matching VS Searching, Modifiers Patterns.

Unit -V:

Introduction to Files, File Handling, Working with File Structure, Directories, Handling Directories

Unit -VI:

Case Study with NumPy/PlotPy/SciPy/GUI Programming, Introduction, Tkinter programming, Tkinter widgets

TEXT BOOK:

1. [Apress]-Beginning Python. From Novice to Professional, 2nd ed. - [Hetland] (2008)

Reference books:

1. Introduction to Computation and Programming using Python, Revised and Expanded Edition, John V. Guttag, The MIT Press.

2. Programming Python, Fourth Edition by Mark Lutz, O'Relly

3. Python Programming using problem solving approach, ReemaThareja, Oxford Higher Education.

Level	H	H	M									

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Probability and Statistics

Code: 9HC15

Pre Requisites: Mathematics Knowledge at Pre-University Level

L	T	P/D	C
2	1	0	3

Course Objectives:

1. Concept of random variables and probability distributions.
2. Sampling distributions and their properties and the concepts on estimation.
3. Concepts on testing the hypothesis concerning to large samples.
4. Topics concerned to small size samples and goodness of fit and independence of attributes.
5. Contents of correlation.
6. Method of least squares and regression.

Course Outcomes:
After the course completion the students will able to:
1. Make Use of the probability distributions to obtain mean and Standard deviation of a random variable. [L3].
2. Compute the Sampling distribution of a statistic and estimate the population parameter. [L2, L3]
3. Test the hypothesis based on the large and small samples. [L4]
4. Calculate Correlation coefficient using Karl Pearson's formula and Spearman's rank correlation. [L3]
5. Construct a curve by least squares method and find the regression lines. [L3]

UNIT-I: Random Variables and Probability Distributions: Random variables – Discrete and Continuous, probability mass and density functions, expectation and variance. Binomial, Poisson and Normal Distributions.

UNIT-II: Sampling Distributions and Estimation: Sampling distribution of the mean (σ - known and unknown), sums and differences, Central limit theorem. Estimation: Point estimation and Interval estimation concerning means for large samples.

UNIT-III: Tests of Hypothesis for Large Samples: Tests of Hypothesis, Type–I and Type-II Errors, Hypothesis testing concerning one mean and two means and test of hypothesis concerning to one Proportion and difference of proportions.

UNIT-IV: Tests of Hypothesis for Small Samples: Student t-test, Hypothesis testing concerning one mean and two Means, F-test and χ^2 test-Goodness of fit, Independence of Attributes.

UNIT-V: Correlation: Types of correlation, coefficient of correlation, Properties. Methods of finding the coefficient of correlation, Scatter diagram, direct method - Karl Pearson's formula Spearman's rank correlation,

UNIT-VI: Curve fitting and Regression: Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves. Types of Regression- linear regression, multiple regressions.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
BUSINESS ECONOMICS AND FINANCIAL ANALYSIS

L	T	P/D	C
3	0	0	3

Code: 9ZC01

Course Outcomes:
After the course completion the students will able to:
1. Explain the Basics of Economics and its relation to Business Economics [L2]
2. Analyze the production function in terms of cost and revenue [L4]
3. Examine the basic market structures and their relevance to business [L4]
4. Outline the fundamentals of financial accounting and prepare financial statements [L2]
5. Apply financial ratios to analyze the financial performance of the company [L3]

UNITI
INTRODUCTIONTOBUSINESSECONOMICS:

Definition, Nature and Scope of Business Economics, Micro and Macro Economics concepts-
National Income, Gross domestic product (GDP), Per capita income, Demand Analysis:
Demand Determinants, Law of Demand and its exceptions, Elasticity of Demand, Types of
Elasticity of Demand and Demand Forecasting–Statistical and Non-Statistical techniques.

UNITII
THEORYOFPRODUCTIONANDCOSTANALYSIS:
Production Function – Isoquants and Isocosts, Internal and External Economies of Scale, Law
of Returns Cost Analysis: Cost concepts, different types of costs, Break-even Analysis
(BEA)-Determination of Break-EvenPoint (simple problems).

UNITIII
INTRODUCTIONTOMARKETS
Market structures: Types of competition, Features of Perfect competition, Monopoly and
Monopolistic Competition, Pricing Methods and strategies.

UNITIV
FINANCIALACCOUNTING-I:
Accounting concepts and Conventions, Double-Entry system of Accounting, Accounting
Cycle, Rules for maintaining Books of Accounts, Journal, Posting to Ledger,Preparation of

Trial Balance.

UNITV
FINANCIAL ACCOUNTING –II:
Introduction to Final accounts, Revenue and Capital Expenditure, elements of Financial Statements, Preparation of Final Accounts with simple adjustments (simple problems)

UNIT-VI
FINANCIALANALYSISTHROUGHRATIOS:
Concept of Ratio Analysis, Various Types of Ratios: Liquidity Ratios (short term solven cyratios), Leverage Ratios (long term solvency ratios), Turnover Ratios and Profitability Ratios(simple problems).

TEXTBOOKS:
1. Aryasri: Managerial Economics and Financial Analysis,2/e,TMH,2005.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Environmental Science

L	T	P/D	C
3	0	0	-

Code: 9HC05

Course Objectives:
1. To understand structure and function of ecosystem
2. To learn classification and uses of natural resources
3. To learn about Understanding the impacts of developmental activities and mitigation measures.
4. To know the source, causes and preventive methods of pollution
5. To understand the importance of ecological balance for sustainable development.
6. To understand the environmental policies and regulations

Course Outcomes

After completion of the course, the student will be able to:

1. Demonstrate ecological principles and natural resources. [L2]
2. Interpret biodiversity and Environmental Pollution. [L5]
3. Develop technologies on the basis of and environmental regulations which in turn help in sustainable development. [L6]

UNIT-I Ecosystems: Definition, Scope, and Importance of ecosystem. Classification, structure, and function of an ecosystem, Food chains, food webs, and ecological pyramids. Flow of energy, Biogeochemical cycles, Bioaccumulation, Biomagnification, ecosystem value, services and carrying capacity.

UNIT-II Natural Resources: Classification of Resources: Living and Non-Living resources, water resources: use and over utilization of surface and ground water, floods and droughts, Dams: benefits and problems. Mineral resources: use and exploitation, environmental effects of extracting and using mineral resources, Land Energy resources: growing energy needs, renewable and non-renewable energy sources, use of alternate energy source.

UNIT-III Biodiversity and Biotic Resources: Introduction, Definition, genetic, species and ecosystem diversity. Value of biodiversity; consumptive use, productive use, social, ethical, aesthetic and optional values. India as a mega diversity nation, Hot spots of biodiversity. Field visit. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts; conservation of biodiversity: In-Situ and Ex-situ conservation.

UNIT-IV Environmental Pollution and Control Technologies: Environmental Pollution: Classification of pollution, Air Pollution: Primary and secondary pollutants. Acid rain-Threshold limit values of chemicals present in environment, Global warming, Ozone layer depletion, Water pollution: Sources and types of pollution. Soil Pollution: Sources and types, Impacts of modern agriculture, degradation of soil. Noise Pollution: Sources and Health hazards, standards, Solid waste: Municipal Solid Waste management, composition and characteristics of e-Waste and its management. Pollution control technologies: Sewage water Treatment, Kyoto protocol, and Montréal Protocol.

UNIT-V Sustainable development and Green Technology: Concept of sustainable development, threats to sustainability population and its explosion, Crazy consumerism, over-exploitation of resources, strategies for achieving sustainable development environmental education, conservation of resources, urban sprawl sustainable cities and sustainable communities, human health , role of IT in Environment, Environmental Ethics, Environmental Economic – Concept of Green Building, Clean Development Mechanism (CDM).

UNIT-VI Environmental Policy, Legislation & Environment Impact Assessment: Environmental Protection act, Legal aspects Air Act- 1981, Water Act, Forest Act, Wild life Act, Municipal solid waste management and handling rules, biomedical waste management and handling rules, hazardous waste management and handling rules. EIA: EIA structure, methods of baseline data acquisition. Overview on Impacts of air, water, biological and Socio-economical aspects. Strategies for risk assessment, Concepts of Environmental Management Plan (EMP).

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Soft Skills Lab

L	T	P/D	C
0	1	2	2

Code: 9HC63

Course objectives:
1. To enable students to make self-assessment and know the importance of certain soft skills and team spirit
2. Know their emotional quotient which guides their thinking, behavior and helps them manage stress efficiently.
3. Equip themselves with the prerequisites, and relevant techniques to effectively attend corporate interviews.

Course Outcomes:
After completion of the course, the student will be able to:
1. Assess themselves and develop soft skills for employability and life-long learning. [L3,L5]
2. Demonstrate values and etiquette in their personal and professional lives.[L2]

Tutorial (1 per week)
Unit-1
1.1 Introduction to soft skills
1.2 SWOT / SWOC Analysis
1.3 SWOT / SWOC Grid
1.4 Johari window

Unit-2
2.1 Emotional intelligence
2.2 Time management
2.3 Goal Setting

Unit-3
3.1 Attitude
3.2 Professional etiquette & Grooming

Unit-4
4.1 Styles of Communication
4.2 **Inter-personal Skills**
4.3 Team work, Team building

4.4 Leadership Skills

Unit-5
5.1 Problem Solving & Decision making
5.2 Critical & Creative thinking

Unit-6
6.1 Values: Personal, Social & Cultural
Lab (2 per week)
Unit-1
- Activities based on Soft skills
- Self-Analysis
- Questionnaire,
- SWOT Practice

Unit-2
Activities:
- big picture challenge
- Goal setting charts

Unit-3
Practice activities on
- Attitude
- Professional etiquette & Grooming

Unit-4
- Activities on social skills
- Role Plays
- Team building activities

Unit-5
Practice activities on
- Problem solving situations
- Games and puzzles
- Case Studies and Group Discussions on decision making and problem solving, creativity and innovation.

Unit-6
Practice activities
- Role Plays

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Technical Seminar

L	T	P/D	C
0	1	0	1

Code: 9E484

Prerequisite: NIL

Course objectives

Develop an ability to understand and present the latest technological developments in computer science. Identify one of them, understand its impact on the event/method/society as a whole and present the seminar on the same which enhances oratory and interview facing skills.

Course Outcomes

At the end of this course, the student will be able to:
1. Identify topics related to Computer Science and Engineering domain or disruptive technologies. [L1]
2. Collect, survey and organize content in PPT form. [L3]
3. Present seminar in an effective manner. [L2]

Procedure:
1. Seminar in-charges shall highlight the significance of Technical Seminar in the first two sessions and enlighten the students on the utility of these seminars.
2. The slots, titles shall be decided upfront and seminar In-charge shall take signatures from students.
3. The same sheet shall be affixed in the respective classrooms and seminar register.
4. If any student fails to present his/her seminar on the given slot, to genuine reasons, they may be asked to present in the subsequent slot / week.
5. Progress of the seminars needs to be reviewed by the concerned HOD once in 15 days.
6. The evaluation for Technical Seminars has to be informed to students and displayed in the classrooms.
7. Report and presentation must contain topic, introduction, explanation, diagrams, tables, applications and conclusions.

There shall be a technical seminar evaluated for 100 marks. The evaluation is purely internal and will be as follows:

Sl.No	Description	Marks
1	Literature survey, topic and content	10
2	Presentation including PPT	10
3	Seminar Notes	05
4	Interaction with audience after presentation	05
5	Final Report 3 copies	10
6	Class room participation	05
7	Punctuality in giving seminar as per Scheduled time and date	10
8	Mid Semester Viva (on the seminar topics completed up to the end of 9th week	15
9	End Semester Viva	30
	Total	**100 Marks**

Student must secure 40% i.e. 40 marks to be successful in sum total (Hundred Marks) in Technical Seminar.

PO's	1	2	3	4	5	6	7	8	9	10	11	12
Level	H	H	H	H	H	H	M		L			H

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
Python Programming Lab

Code: 9FC62

L	T	P/D	C
0	0	4	2

Prerequisite: Problem Solving using C Lab

Course Objectives

1. Basics of Python programming, Decision Making and Functions in Python, Object Oriented Programming using Python.
2. To introduce to a personal computer and its basic peripherals, the process of assembling a personal computer, installation of system software like MS Windows, Linux and the required device drivers.

Course Outcomes

At completion of this course, the student will be able to:
1. Develop the skills in python basics, OOPS concepts and build applications to demonstrate the core concepts of python. [L1 & L6]
2. Explain python modules, packages, files, data processing and GUI design to develop python applications. [L2 & L6]

Week -1:

1. Use a web browser to go to the Python website http://python.org. This page contains information about Python and links to Python-related pages, and it gives you the ability to search the Python documentation.
2. Start the Python interpreter and type help() to start the online help utility.
3. Start Python interpreter and use it as Calculator.

Week -2:

4. If you run a 10 kilometer race in 43 minutes 30 seconds, what is your average time per mile? What is your average speed in miles per hour? (Hint: there are 1.61 kilometers in a mile).
5. The volume of a sphere with radius r is 5? (Use Sphere volume formula)

6. Suppose the cover price of a book is $24.95, but bookstores get a 40% discount. Shipping costs $3 for the first copy and 75 cents for each additional copy. What is

the total wholesale cost for 60 copies?

Week -3:

7. A function object is a value you can assign to a variable or pass as an argument. For example, do_twice is a function that takes a function object as an argument and calls it twice:
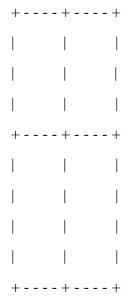

```python
def do_twice(f):

f()

f()
```

Here's an example that uses do_twice to call a function named print_spam twice.

```python
def print_spam():

print 'spam'

do_twice(print_spam)
```

  a. Type this example into a script and test it.

  b. Modify do_twice so that it takes two arguments, a function object and a value, and calls the function twice, passing the value as an argument.

  c. Write a more general version of print_spam, called print_twice, that takes a string as a parameter and prints it twice.

d. Use the modified version of do_twice to call print_twice twice, passing 'spam' as an argument.

8. Write a function that draws a grid like the following:

```
+ - - - - + - - - - +

|        |        |

|        |        |

|        |        |

+ - - - - + - - - - +

|        |        |

|        |        |

|        |        |

|        |        |

+ - - - - + - - - - +
```

Hint: to print more than one value on a line, you can print a comma-separated

sequence.

9. Write a function called gcd that takes parameters a and b and returns their greatest common divisor.

10. Write a function called is_palindrome that takes a string argument and returns True if it is a palindrome and False otherwise. Remember that you can use the built-in function len to check the length of a string.

Week-4:

11.   Write a function called is_sorted that takes a list as a parameter and returns True if the list is sorted in ascending order and False otherwise.

12.   Write a function called has_duplicates that takes a list and returns True if there is any element that appears more than once. It should not modify the original list.

Week-5:

12.   Write a function called remove_duplicates that takes a list and returns a new list withonly the unique elements from the original. Hint: they don't have to be in the sameorder.

13.   The wordlist I provided, words.txt, doesn't contain single letter words. So you might want to add "I", "a", and the empty string.

14.   Write a python code to read a dictionary values from the user. Construct a function to invert its content. i.e., keys should be values and values should be keys.

15.   If there are 23 students in your class, what are the chances that two of you have the same birthday? You can estimate this probability by generating random samples of 23 birthdays and checking for matches.
       Hint: you can generate random birthdays with the randint function in the random module

16.   How does a module source code file become a module object?

Week-6:

17. Why might you have to set your PYTHONPATH environment variable?
18. What is a namespace, and what does a module's namespace contain?
19. How do you make a module? Give an example of construction of a module using different geometrical shapes and operations on them as its functions.
20. What is the purpose of a _ _init_ _.py file in a module package directory? Explain with a suitable example.
21. Use the structure of exception handling all general purpose exceptions.

Week-7:

22. a. Write a function called draw_rectangle that takes a Canvas and a Rectangle as arguments and draws a representation of the Rectangle on the Canvas.

    b. Add an attribute named color to your Rectangle objects and modify draw_rectangleso that it uses the color attribute as the fill color.

c. Write a function called draw_point that takes a Canvas and a Point as arguments an draws a representation of the Point on the Canvas.

d. Define a new class called Circle with appropriate attributes and instantiate a few Circle objects. Write a function called draw_circle that draws circles on the canvas.

Week-8:

23. Write a Python program to demonstrate the usage of MRO in multiple levels of Inheritances.

24. Write a python code to read a phone number and email-id from the user and validate it for correctness.

Week-9:

25. Write a Python code to merge two given file contents into third file.
26. Write a Python code to open a given file and construct a function to check for given words present in it and display on found.

Week-10:

27. Import numpy, Plotpy and Scipy and explore their functionalities.
28. Write a GUI program to create a window wizard having two text labels, two text fields and two buttons as Submit and Reset.

Week -11: Case Study on Mario Game, Hangman game

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
DATABASE MANAGEMENT SYSTEMS LAB

Code: 9FC63
Prerequisite: NIL

L	T	P/D	C
0	0	3	1.5

Course objective:

Design the optimal queries using structured and unstructured query languages like SQL and PL/SQL by making use of control structures, cursors, triggers and functions/procedures.

Course Outcomes:
After completion of this course, the student will be able to:

1. Infer database language commands to create simple database and analyze the database using queries to retrieve records. [L4]
2. *Applying PL/SQL for processing database. [L3]*

Exercises:

1. Creation, altering and dropping of tables and inserting rows into a table (use constraints while creating tables) examples using SELECT command.
2. Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, Constraints.
   Example: - Select the roll number and name of the student who secured fourth rank in the class.
3. Queries using Aggregate functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and dropping ofViews.
4. Queries using Conversion functions (to_char, to_number and to_date), string functions (Concatenation, lpad, rpad, ltrim, rtrim, lower, upper, initcap, length, substr and instr), date functions (Sysdate, next_day, add_months, last_day, months_between, least, greatest, trunc, round, to_char,to_date)
5. i)Creation of simple PL/SQL program which includes declaration section, executable section and exception –Handling section (Ex. Student marks can be selected from the table and printed for those who secured first class and an exception can be raised if no records were found)
   ii)Insert data into student table and use COMMIT, ROLLBACK and SAVEPOINT in PL/SQLblock.
6. Develop a program that includes the features NESTED IF, CASE and CASE expression. The program can be extended using the NULLIF and COALESCE functions.
7. Program development using WHILE LOOPS, numeric FOR LOOPS, nested loops using ERROR Handling, BUILT –IN Exceptions, USE defined Exceptions, RAISE-

APPLICATION ERROR.

8. Programs development using creation of procedures, passing parameters IN and OUT Of PROCEDURES.

9. Program development using creation of stored functions, invoke functions in SQL Statement and write complex functions.

10. Program development using creation of package specification, package bodies, private objects, package variables and cursors and calling stored packages.

11. Develop programs using features parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of clause and CURSOR variables.

12. Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers.

13. Queries using SQL-INJECTION: AND/OR Attack, Comments Attack, String Concatenation Attack, UNION Injection Attack

TEXT BOOKS:

1)   ORACLE PL/SQL by example. Benjamin Rosenzweig, Elena Silvestrova, Pearson Education 3Edition

2)   ORACLE DATA BASE LOG PL/SQL Programming SCOTT URMAN, Tata Mc-Graw Hill.

3) SQL and PL/SQL for Oracle 10g, Black Book, Dr. P. S.Deshpande.

SREENIDHI INSTITUTE OF SCIENCE AND TECHNOLOGY
Syllabus for B.Tech CSE II year II Semester
IT Workshop and Computer Organization Lab

L	T	P/D	C
0	0	4	2

Code: 9FC64

Prerequisite: Problem Solving using C Lab

Course Objectives:

1. To introduce to a personal computer and its basic peripherals, the process of assembling a personal computer, installation of system software like MS Windows, Linux and the required device drivers.
2. Analyze and apply working of 8086.
3. Compare the various interface techniques. Analyze and apply the working of 8255, 8279 ICs and design and develop the programs.
4. Learning the Communication Standards.

Course outcomes:

After completion of the course, the student will be able to:

1. Apply knowledge for computer assembling and software installation and ability to solve the trouble shooting problems along with computing various works using MS-Office such as Ms Power Point Presentation, Ms Word and Ms Excel (by using wide range of function in Excel). [L2,L3]
2. Demonstrate the architecture of 8086 processor, assembly language programming and interfacing with modules. And determine Arithmetic operations of binary numbers system[L2,L3]

IT Workshop

Week 1:

Introduction to Computer: Identify the peripherals of a computer, components/peripherals in a CPU & its functions. Introduction to the types of Operating System, Assembling and disassembling demonstration.

Week 2:

Install computer with dual boot operating system (Windows, Linux with PowerPoint presentation). Comparison of types of OS in different platform

Week3:

Introduction to S/W's, difference b/w hardware and software. Introduction to MS-Office and its importance.

Ms Word

Ms Power Point Presentation

Week4:

Introduction to Excel

Features: Accessing, Overview at toolbars, saving excel files, Gridlines, Format cells, Summation, Auto fill, formatting text.

Formula in excel – Average, Standard Deviation, Charts, Roaming & Inserting worksheets, Hyper linking, count function, lookup / Vlookup, sorting, Conditional formatting.

<div align="center">Computer Organization lab</div>

<u>PART – A</u>

Introduction to MASM/TASM Assembler

Familiarization with 8086 Kit

Experiment I, II

Write ALP and execute the program to

1. Add two 8-bit numbers
2. Add two 16-bit numbers
3. Add two 32-bit numbers
4. Subtract two 8-bit numbers
5. Subtract two 16-bit numbers
6. Subtract two 32-bit numbers
7. Multiply two 8-bit numbers
8. Multiply two 16-bit numbers
9. Perform 8-bit division
10. Perform 16-bit division
11. Find square of a number
12. Find cube of a number
13. Exchange two numbers
14. Find factorial of a given number

Experiment III

Write ALP and execute the program to

15. Add a given series of numbers

16. Find average of a given series of numbers
17. Find sum of squares of a given series of numbers
18. Find sum of cubes of a given series of numbers

Experiment IV

Write ALP and execute the program to

19. Find largest number from a given series of numbers
20. Find smallest number from a given series of numbers
21. Sort a series of given numbers in ascending order
22. Sort a series of given numbers in descending order

Experiment V

Write ALP and execute the program to

23. Display Fibonacci series
24. Move a string of data bytes from one location to another
25. Concatenate two strings
26. Reverse a given string

Experiment V1

Write ALP and execute the program to

27. Compare two strings
28. Find length of a given string
29. Find whether the given byte is in the string or not

PART-B

Write ALP and interface with 8086

1. Interface a stepper motor
2. Generate a triangular wave, square wave and saw tooth waves, Interface keyboard

TEXT BOOKS:

1. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson
2. Microprocessors and interfacing – Douglas V.Hall, TMH, 2nd Edition, 1999.
